NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GAAATCCCTTTACCTATCAGAAACAAAACACTCTCTGGTTTA

The strings of n's in this record represent gaps between contigs, and the length of each string corresponds to the length of the gap except where there are 20 n's. A string of 20 n's represents a gap of unknown length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Functional and comparative genomic analysis of the piebald deletion region of mouse chromosome 14 Genomics 80 (2), 172 (2002)

It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Further information can be found at http://www.sanger.ac.uk/PROP/Chr20 Mapping Group. Further information can be found at http://www.sanger.ac.uk/PROP/Chr20 Mis sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 10; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP11-19D2 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBACe3.6 IMPORTANT: This sequence is not the entire insert of clone RP11-19D2 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true right end of clone RP11-19D2 is at 1 in this sequence. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk MMENT On Aug 10, 1999 this sequence version replaced gi:5596948. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                               78571

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING IMPORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for Genetics, Washington University, St. Louis
McPherson, Department of Genetics, Washington University, St. Louis
McPherson, Importantion about the map position of this
MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org The RPCI-11 human BAC library was made from the blood of SOURCE INFORMATION: pBACe3.6 one male

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-18C9, 200 base pair overlap. Actual start of this clone is at base position 1 of RP11-527A7, actual end is at base position 42119 of RP11-18C9
